Status	active
Status summary	r32 (Tgram-completeness Wave A SA-b — HRD-136 webhook validator skeleton) marks HRD-136 Open→in_progress. New <code>commons_messaging/channels/tgram/webhook.go</code> lands the Bot API webhook <code>secret_token</code> validation layer for the future V1.x webhook-path operator (spec V3 §11.1 alternative to <code>getUpdates</code>). <code>WebhookHandler</code> validates the <code>X-Telegram-Bot-API-Secret-Token</code> header via <code>crypto/subtle.ConstantTimeCompare</code> (timing-attack-safe), refuses empty secret at construction (<code>NewWebhookHandler("",...)</code> errors — §107 footgun guard), returns 401 with EMPTY body on header mismatch/missing (no token-existence-oracle leakage to probes), 400 on malformed JSON, 405 on wrong method, 500 (no body) on <code>InboundHandler</code> error. Decoded <code>tele.Update</code> is forwarded as the SAME <code>InboundEvent</code> shape <code>OnText/OnEdited</code> produce — unified downstream contract. Skeleton-only: wiring into <code>pherald listen --webhook + setWebhook(secret_token=...)</code> registration + TLS-bound public listener deferred to V1.x; the cryptographic layer is here + tested so the future flip is one-flag. 7/7 hermetic <code>httptest</code> tests - race: <code>ValidSecret_Dispatches</code>, <code>InvalidSecret_Returns401_NoTokenLeak</code>, <code>MissingSecret_Returns401</code>, <code>GET_Returns405</code>, <code>MalformedJSON_Returns400</code>, <code>EmptySecretAtConstruction_ErrorsLoud</code>, <code>ConstantTimeCompare</code>. Part 2 of 6 in the tgram-completeness wave. Prior r31 (Tgram-completeness Wave A SA-a — HRD-135 lifecycle handlers) marked HRD-135 Open→in_progress. <code>commons_messaging/channels/tgram/subscribe.go</code> gains 3 new event handlers per the operator's tgram-completeness mandate (Section 2 of the 2026-05-28 live-gap analysis): OnEdited rebuilds the same <code>InboundEvent</code> shape <code>OnText</code> does + <code>Raw["edited"]=true</code>; OnMyChatMember detects bot kicked/left/restricted status transitions (with Alice-left and promotion-to-Admin false-positive guards) + emits a grep-able <code>log.Printf</code> carrying <code>ErrBotKicked</code> text + the <code>chat_id</code>; 15 service-message endpoints (<code>UsersJoined/UserLeft/NewGroupTitle/etc.</code>) registered to a single <code>serviceHandler</code> that emits nothing to <code>InboundHandler</code> but logs <code>tgram: ignored service message kind=... chat_id=...</code>. Sentinel var <code>ErrBotKicked</code> package-level so callers can errors. Is. 17/17 PASS - race -count=1 (3 new in <code>subscribe_lifecycle_test.go</code> + 14 existing, zero

regression). Part 1 of 6 in the tgram-completeness wave. **Prior r30 (v0.6.0 Wave 7 T12 — operator guide; Wave 7 CODE-COMPLETE) marked HRD-121**

Open→in_progress. docs/guides/MESSENGER_CHANNELS.md ships as the operator-facing entry point for the multi-channel messenger framework — 610 lines, 11 sections covering architecture (commons.Channel outbound vs commons_messaging/channels.Channel inbound; ASCII fan-in diagram), HERALD_CHANNELS selector (fail-loud on unknown), Telegram + Slack live-setup walkthroughs (BotFather + api.slack.com/apps including Socket Mode app-token), §107 token-redaction security note for xoxb-/xapp- (citing TestSlack_Send_ErrorDoesNotLeakToken), per-channel inbox isolation, self-filter contract, URL schemes, "add a new channel" implementer checklist + "what you do NOT touch" companion (the framework's hot paths come for free), 10-entry troubleshooting cookbook, 6-checklist pre-deploy audit, full HRD/spec cross-references. Generated 3 siblings (.html/.pdf/.docx) via `REGEN_ALL=1 scripts/export_docs.sh`. **Wave 7 (T1-T12) is now code-complete:** HRD-110..114 (framework, already Fixed pre-session) + HRD-115 (slack adapter Socket Mode, 54d4316) + HRD-116 (qaherald slack MessengerClient + builder, 6811114) + HRD-117 (spec V3 r12→r13, 7f1b043) + HRD-118 (e2e E124-E131, 17ecd0b) + HRD-119 (paired §1.1 mutation gate 4/0, 6737040) + HRD-120 (multi-channel §11.4.85 stress+chaos 12/12, 86dfa1e) + HRD-121 (this row). Wave 7 HRDs **stay in_progress** pending operator-live Slack evidence (mirrors Wave 6's v0.4.0 deferred-to-T13b pattern); v0.6.0 tag is operator-gated on live docs/qa/HRD-115-LIVE-*/workspace evidence per §107.x. **Prior r29 (v0.6.0 Wave 7 T11 — multi-channel §11.4.85 stress+chaos) marked HRD-120 Open→in_progress.** Extended pherald/cmd/pherald/listen_stress_chaos_test.go (HRD-126's single-channel scaffold) with two W7-specific multi-channel tests: `TestListen_MultiChannel_StressBurst` (2 channels × 200 concurrent events → 400 unique IDs all dispatched exactly once + **per-channel attribution** via `perChannelCountingReplier` keyed on `rcpt.Channel` proves the `channelRouter` doesn't cross-wire; ~9-19k events/s under -race) + `TestListen_MultiChannel_ChaosOneChannelDies_OtherKeepsGoing` (the fan-in concurrency proof — tgram errors immediately, slack ticks 50 events at 2ms; assertion conjunction ≥5 slack dispatches landed BEFORE tgram fail-loud teardown AND the tgram error is tagged `channel="tgram-stub" + subscribe` → only true under a CONCURRENT goroutine orchestration, not a strictly-serial one). **runListen contract:** fail-loud-tears-down-siblings (pherald/cmd/pherald/listen.go: 387-398); per-channel supervised restart is a deferred Wave 8 design and the doc-comment warns against silent change. 12/12 PASS over -race -count=3 (3 iterations × 2 new + 2 sibling HRD-126 tests); race-detector clean. Evidence anchors `multichannel_no_drop_under_burst=1` (stress) + `multichannel_concurrency_proven=1` (chaos) at docs/qa/HRD-120-20260528T110000Z/. **Prior r28 (v0.6.0 Wave 7 T10 — paired §1.1 mutation gate) marked HRD-119 Open→in_progress.** `tests/test_wave7_mutation_meta.sh` ships 3 paired hermetic mutations against the Wave 7 multi-channel framework — **M1** blank `IsSelfEcho` (echo-loop hazard), **M2** drop slack channels.Register in init() (registry-resolution broken), **M3** drop slack thread_ts append (reply threading degrades) — each mutated build observed FAIL on the matching e2e detector + restored byte-for-byte + post-restore PASS. New `TestSlackRegisteredViaInit` detector added to `slack_test.go` (it asserts `channels.Names()` contains "slack" — the only test that would FAIL under M2 specifically; without it M2 would silently "no tests to run" PASS-bluff). Gate run = **4 PASS / 0 FAIL** (3 mutations + 1 quiescence assertion, no MUTATED W7 - residue in 3 production target files post-restore). Reuses Wave 6 canonical lockfile + trap + assert_restored + pre-flight guard verbatim. **FOREGROUND-ONLY** (§107.y /

Field	Value
	feedback_no_concurrent_mutation_gates operator mandate). Prior r27 (v0.6.0 Wave 7 T9 — e2e multi-channel invariants) marked HRD-118 Open→in_progress. scripts/e2e_bluff_hunt.sh gains E124-E131 (8 invariants anchored to live test names already shipped in HRD-110..117): E124 channels registry (resolve + unknown-errors), E125 tgram self-filter post-Wave-7 generalization (TestSubscribeBotSelfFilter), E126 slack adapter (TestSlackSatisfiesChannel + auth.test + chat.postMessage + registry wiring + sc_anchor to T6 docs/qa), E127 LIVE Slack triple-guarded (HERALD_SLACK_BOT_TOKEN + HERALD_SLACK_CHANNEL_ID + grep TestSlack_Live_Send — the third guard prevents the §107 "no tests to run = exit 0 = PASS-bluff" gotcha when env is set but no live-test exists), E128 per-channel inbox isolation + content-addressed idempotency, E129 generalized IsSelfEcho (Username + UserID + empty-self echo-loop hazard), E130 multi-channel pherald listen wiring (TestListenWiresHandlerAndExitsOnCancel), E131 qaherald messenger.Build dispatch (tgram + slack + unknown-errors-loud + sc_anchor to T7 docs/qa). Prior r26 (v0.6.0 Wave 7 T8 — spec V3 r12→r13) marked HRD-117 Open→in_progress. Spec edits document the already-shipped Wave 7 framework + Slack: §11.0 gains the inbound-runtime extension note (commons_messaging/channels.Channel embeds commons.Channel + SendReplyGeneric + BotSelfIdentity + DownloadAttachment + init()-registered registry + generalized IsSelfEcho via `SelfIdentity{Kind: IdentityUsername
Issues	HRD-008, HRD-015, HRD-019..HRD-025, HRD-029..HRD-056, HRD-081, HRD-085..HRD-090, HRD-115..HRD-121, HRD-135, HRD-136, HRD-131 37 open / in-progress workable items. r17 (v1.0.0 Batch A): HRD-018 (commons_constitution package — Evaluator+emit+migrations+bundle-hash+mode-ladder, completing the constitution_audit write-through that was the remaining §107 PASS-bluff: RunOutcome.Audited set true with nothing persisted), HRD-026 (bundle-hash now persisted on every emitted event AND audit row for replay), HRD-027 (mode-ladder runtime config + 3 admin REST endpoints GET/PUT /v1/compliance/modes[:rule_id]) closed atomically Task→done, migrated Issues→Fixed per §11.4.19. Evidence docs/qa/HRD-018-20260527T142556Z/ (real-PG emit→persist + admin-REST flip round-trips + §11.4.85 stress 512 emit→persist no-lost-writes + chaos 960 concurrent flips). Prior r16:
Issues summary	HRD-122..HRD-130 (GAP-3 §11.4.85 stress+chaos suite) closed atomically as Completed + HRD-132 (Runner idempotency-window bug) closed as Fixed — 11 rows migrated Issues→Fixed; HRD-131 (SQLite SSOT migration Phase 1) remains OPEN (Phases 2-6 follow-on). r15: HRD-100 closed atomically (Wave 6 pherald inbound runtime — code-doc closure; live evidence operator-pending → T10b). r14: substrate upgrade only (Wave 4b TOON; no HRDs migrated). r12: HRD-016 closed atomically (Wave 3b pherald Runner live + e2e E37-E42 PASS or honest SKIP-with-reason when PG:24100 absent). r11: HRD-011 (Telegram live) closed atomically with live message_id=5 evidence. r10 doc-cleanup renumbered HRD-093 → HRD-099. r9: HRD-028 + HRD-098 closed (Wave 3a). Carry-over to Wave 3c: HRD-024 (iherald paging), HRD-033 (destructive-guard body), HRD-018..027 flavor-specific bindings, plus the rest of the §43 command catalogue.

Per Universal §11.4.74 every new row carries a Catalogue-Check line in its References cell (one of reuse|extend|no-match <org/repo>@<sha>). For HRDs whose catalogue-check is still pending, the row records no-match (2026-05-20) — operators reviewing the implementation PR will re-verify.

ID	Type	Status	Criticality	Title
HRD-015	task	open	low	Inheritance gate I8 invariants for Go scaffold (go.work + commons/typo3 passes) cherald constitution bindings — cherald/internal/bindings cherald-owned §42.3 rules as concrete commons_constitution. through 5 event classes (.policy.violation/.gate.failed/.gate.recovered/. over the Batch-A emit+persist+audit foundation; POST /v1/compl surface drives detect→emit→persist→audit, visible on the existing GE pull surface. Vertical-slice bespoke detectors landed (§11.4.29 naming §11.4.44 doc-revision-header, §11.4.18 script-docs, §11.4.73 spec-drift remaining 25 rules use the shared marker-check mechanism (verdict d catalogue command / sweep) with the full emit-routing framework in p remaining bespoke detector is per-rule follow-up.
HRD-019	task	in_progress	high	sherald host-safety + repo-safety constitution bindings — sher al bindings Pipeline registers the 15 sherald-owned §42.3 host/repo-sa §11.4.24/.26/.32/.36/.41/.47/.71, §12.1/.2/.3/.6) as concrete commons_constitution.Evaluator impls routed through 6 S (.host.safety.breach/.repo.safety.breach/.gate.re over the Batch-A emit+persist+audit foundation, mirroring the proven pattern. The 3 named DETECTION hooks landed as REAL pure class detector (§9.1: rm/git-reset/clean without backup → .repo.safety interceptor (§11.4.41/§9.2: force-push without merge-first OR session- .repo.safety.breach), mem-budget watcher (§12.6: reported u .host.safety.breach) — plus forbidden-host-op (§12.1) + prer remaining rows. CRITICAL §12-safety: every detector DETECTS+RE string description; NONE performs the destructive op, force-pushes, s allocates memory (the mem-budget watcher reads a fabricated fraction §43 command bodies (HRD-033/046/056) supply the live op-intercept

HRD-054	task	in_progress	middle	§11.4.73 cherald spec-version check — Revision-vs-edits implemented as cherald §43 verify/check command (cherald/cmd/checkops_cmds.go) feeding the HRD-019 cherald binding; detect-only; hermetic -race green
HRD-055	task	in_progress	middle	§11.4.74 cherald catalogue-check <pr> — scan PR for Catalogue runner over vasic-digital + HelixDevelopment — Batch C: implemented as cherald §43 verify/check command (cherald/cmd/cherald/checkops_cmds.go) feeding the HRD-019 cherald binding; detect-only; hermetic -race green
HRD-056	task	in_progress	high	§12.6 sherald mem-budget watch — daemon-mode 60% threshold .host.safety_breach — Batch C: implemented as sherald §43 verify/check command (sherald/cmd/sherald/sysops_cmds.go) feeding the HRD-020 sherald binding; detect-only; hermetic -race green GATE (detects+classifies+exits-nonzero, never performs the op); hermetic verifier fix so the CLI runs without a JWT secret
HRD-081	task	open	low	Extend digital.vasic.containers/pkg/compose to detect docker compose runtime and either emit runtime-appropriate flags (none for compose) or fall back to host-side healthcheck polling. Composes with compose.WithWait(true) works across both backends. Also fix podman-compose ps output (returns 0 services even when containers are running directly). Per §11.4.76: extend upstream submodule, never reimplement
HRD-085	task	in_progress	middle	Implement single-task admin operations on commons_infra.pgxTaskRepository: GetByID, Update, Delete. Required for Requeue + MoveToDeadEnd operator tooling. Currently all three return ErrUnsupported (HRD-085). BackgroundTask row by ID; full-row Update including JSONB column decision per §107.
HRD-086	task	in_progress	middle	Implement worker-side running-task state mutations on commons_infra.pgxTaskRepository — UpdateStatus, UpdateHeartbeat, SaveCheckpoint. Required by River worker reaper. Currently all four return ErrUnsupported (HRD-086). Scope: guarded by valid-state-machine check; progress as (float64, message) updated_at = now() writeback; checkpoint as opaque []byte task row.
HRD-087	task	in_progress	low	Implement admin / stats / audit reads on commons_infra.pgxTaskRepository: GetByStatus, GetPendingTasks, CountByStatus, GetTasks, v1/queue/* introspection endpoints + Peek delegate. Currently all return ErrUnsupported (HRD-087). Scope: status-filtered paginated read; Peek; status-bucketed counts; per-task execution-history rows from the task_execution_history table.
HRD-088	task	in_progress	middle	Implement queue-recovery reads on commons_infra.pgxTaskRepository: GetStaleTasks, GetByWorkerID. Drives the stuck-task reaper loop. Currently both return ErrUnsupported (HRD-088). Scope: guarded by valid-state-machine check; progress as (float64, message) updated_at; per-worker assignment lookup for re-dispatch
HRD-089	task	in_progress	low	Implement resource-monitor I/O on commons_infra.pgxTaskRepository: SaveResourceSnapshot, GetResourceSnapshots. Persists resource samples for capacity-planning + post-mortem. Currently both return ErrUnsupported (HRD-089). Scope: append-only insert keyed by (task_id, capacity) paginated read in reverse-chronological order. Schema target: a task_execution_history table not yet in the §9.6 migration set — adding it is part of this HRD.

ID	Type	Status	Criticality	Title
HRD-090	task	open	middle	Implement dead-letter handling on <code>commons_infra.pgxTaskRep</code>. <code>MoveToDeadLetter</code>. Required failure path when a task exhausts re-invariant. Currently returns <code>ErrUnsupported</code> (HRD-090). Scope: BackgroundTask row to a <code>dead_letter_tasks</code> table with the failed row JSONB snapshot; emit a <code>.queue.dead_letter</code> event via <code>common</code> per §42.1. Schema target: a <code>dead_letter_tasks</code> table not yet in t adding it is part of this HRD.
