| Status summary | <p><b>r31 (Tgram-completeness Wave A SA-a — HRD-135 lifecycle handlers) marks HRD-135 Open→in_progress.</b> <code>commons_messaging/channels/tgram/subscribe.go</code> gains 3 new event handlers per the operator's tgram-completeness mandate (Section 2 of the 2026-05-28 live-gap analysis): <b>OnEdited</b> rebuilds the same <code>InboundEvent</code> shape <code>OnText</code> does + <code>Raw["edited"]=true</code>;</p> <p><b>OnMyChatMember</b> detects bot kicked/left/restricted status transitions (with Alice-left and promotion-to-Admin false-positive guards) + emits a grep-able <code>log.Printf</code> carrying <code>ErrBotKicked</code> text + the <code>chat_id</code>; <b>15 service-message endpoints</b> (<code>UsersJoined/UserLeft/NewGroupTitle/etc.</code>) registered to a single <code>serviceHandler</code> that emits nothing to <code>InboundHandler</code> but logs <code>tgram: ignored service message kind=... chat_id=...</code>. Sentinel var <code>ErrBotKicked</code> package-level so callers can <code>errors.Is</code>. 17/17 PASS -race -count=1 (3 new in <code>subscribe_lifecycle_test.go</code> + 14 existing, zero regression). Part 1 of 6 in the tgram-completeness wave. <b>Prior r30 (v0.6.0 Wave 7 T12 — operator guide; Wave 7 CODE-COMPLETE) marked HRD-121 Open→in_progress.</b> <code>docs/guides/MESSENGER_CHANNELS.md</code> ships as the operator-facing entry point for the multi-channel messenger framework — 610 lines, 11 sections covering architecture (<code>commons.Channel</code> outbound vs <code>commons_messaging/channels.Channel</code> inbound; ASCII fan-in diagram), <code>HERALD_CHANNELS</code> selector (fail-loud on unknown), Telegram + Slack live-setup walkthroughs (<code>BotFather</code> + <code>api.slack.com/apps</code> including <code>Socket Mode</code> app-token), §107 token-redaction security note for <code>xoxb-/xapp-</code> (citing <code>TestSlack_Send_ErrorDoesNotLeakToken</code>), per-channel inbox isolation, self-filter contract, URL schemes, "add a new channel" implementer checklist + "what you do NOT touch" companion (the framework's hot paths come for free), 10-entry troubleshooting cookbook, 6-checklist pre-deploy audit, full HRD/spec cross-references. Generated 3 siblings (<code>.html/.pdf/.docx</code>) via <code>REGEN_ALL=1 scripts/export_docs.sh</code>. <b>Wave 7 (T1-T12) is now code-complete:</b> HRD-110..114 (framework, already Fixed pre-session) + HRD-115 (slack adapter <code>Socket Mode</code>, 54d4316) + HRD-116 (qaherald slack <code>MessengerClient</code> + builder, 6811114) + HRD-117 (spec V3 r12→r13, 7f1b043) + HRD-118 (e2e E124-E131, 17ecd0b) + HRD-119 (paired §1.1 mutation gate 4/0, 6737040) + HRD-120 (multi-channel</p> |

Per Universal §11.4.74 every new row carries a Catalogue-Check line in its References cell (one of `reuse|extend|no-match` <org/repo>@<sha>). For HRDs whose catalogue-check is still pending, the row records `no-match` (2026-05-20) — operators reviewing the implementation PR will re-verify.

|         |      |             |             | operator tooling. Currently all three return <code>ErrUnsupported</code> (HRD-085). BackgroundTask row by ID; full-row Update including JSONB column decision per §107.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| HRD-086 | task | in_progress | middle      | Implement worker-side running-task state mutations on <code>commons_infra.pgxTaskRepository</code> — <code>UpdateStatus</code> , <code>UpdateHeartbeat</code> , <code>SaveCheckpoint</code> . Required by River worker reaper. Currently all four return <code>ErrUnsupported</code> (HRD-086). Scope: guarded by valid-state-machine check; progress as <code>(float64, message)</code> ; <code>updated_at = now()</code> writeback; checkpoint as opaque <code>[]byte</code> task row.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| HRD-087 | task | in_progress | low         | Implement admin / stats / audit reads on <code>commons_infra.pgxTaskRepository</code> — <code>GetByStatus</code> , <code>GetPendingTasks</code> , <code>CountByStatus</code> , <code>GetTasks</code> , <code>v1/queue/*</code> introspection endpoints + Peek delegate. Currently all return <code>ErrUnsupported</code> (HRD-087). Scope: status-filtered paginated reads; Peek; status-bucketed counts; per-task execution-history rows from the <code>task_execution_history</code> table.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| HRD-088 | task | in_progress | middle      | Implement queue-recovery reads on <code>commons_infra.pgxTaskRepository</code> — <code>GetStaleTasks</code> , <code>GetByWorkerID</code> . Drives the stuck-task reaper loop. Currently both return <code>ErrUnsupported</code> (HRD-088). Scope: against <code>updated_at</code> ; per-worker assignment lookup for re-dispatch.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| HRD-089 | task | in_progress | low         | Implement resource-monitor I/O on <code>commons_infra.pgxTaskRepository</code> — <code>SaveResourceSnapshot</code> , <code>GetResourceSnapshots</code> . Persists samples for capacity-planning + post-mortem. Currently both return <code>ErrUnsupported</code> (HRD-089). Scope: append-only insert keyed by <code>(task_id, capacity)</code> ; paginated read in reverse-chronological order. Schema target: a <code>task_resource_snapshots</code> table not yet in the §9.6 migration set — adding it is part of this HRD.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| HRD-090 | task | open        | middle      | Implement dead-letter handling on <code>commons_infra.pgxTaskRepository</code> — <code>MoveToDeadLetter</code> . Required failure path when a task exhausts retries invariant. Currently returns <code>ErrUnsupported</code> (HRD-090). Scope: BackgroundTask row to a <code>dead_letter_tasks</code> table with the failed row JSONB snapshot; emit a <code>.queue.dead_letter</code> event via coordinator per §42.1. Schema target: a <code>dead_letter_tasks</code> table not yet in the migration set — adding it is part of this HRD.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| HRD-115 | task | in_progress | high        | Wave 7 T6 — Slack channel adapter (Socket Mode): <code>commons_messaging.slack/</code> implements <code>channels.Channel</code> — <code>New/NewWithBaseChannel</code> , <code>Parse</code> (parsing <code>slack://&lt;bot-token&gt;@&lt;workspace&gt;/&lt;channel-id&gt;</code> ), <code>Send</code> ( <code>chat.postMessage</code> ), <code>SendReply</code> ( <code>thread_ts</code> ) + <code>SendReplyGetAttachments</code> ( <code>files.uploadV2</code> attachment fan-out), <code>Subscribe</code> (Socket Mode), <code>Unsubscribe</code> ( <code>auth.test</code> → <code>IdentityUserID</code> , cached), <code>DownloadAttachment</code> ( <code>files.open</code> ), <code>WriteContentAddressableStorage</code> ( <code>inbox/slack/&lt;sha&gt;.&lt;ext&gt;</code> via <code>channels.WriteContentAddressableStorage</code> ). Vendored submodules/ <code>slack-go</code> @ v0.16.0 (commit 209ec09). Schema target: <code>commons_messaging/go.mod</code> replace per Herald §11.4.74. 22 headers (incl. subtests) - race green; inheritance gate 15/0 post-.gitmodules-ec2. <code>TestSlackSatisfiesChannel</code> confirms interface satisfaction. |

The OnMyChatMember closure returns nil poller keeps running for OTHER chats. 17/17 PASS -race -count subscribe_lifecycle_test.go + 14 existing).</p> <p>Migrate text HRD trackers to versioned SQLite single-source-of-truth (6-phase) — DB committed as authoritative SSoT per operator mandate (item): file the scope-locked tracking HRD. Phase 2: scaffold/adopt the already lives in the constitution submodule (constitution/scripts/items/) — Herald references it per §11.4.74 catalogue-first and new sync md→db (load docs/Issues.md / docs/Fixed.md / *_Summary.md / docs/CONTINUATION.md §3 into docs/.workable sync db→md byte-identical (round-trip regeneration so MD↔DB drift impossible). Phase 5: generator shims (the *_Summary.md variants become derived from the DB). Phase 6: prohibit text-direct edits (release the only authoring surface). Operator divergence from the parent §11.4 regeneration default: for Herald the DB IS the authoritative artefact — docs/.workable_items.db is version-controlled (committed), but only the transient WAL/SHM sidecars (docs/.workable_items.db gitignored ("We should not git ignore our workable items database since truth regarding items we have to do on the project!"). <b>Scope-lock: this row) + Phase 2 adoption ONLY.</b> Phases 3-6 (md→db sync, db→md sync generator shims, text-direct-edit prohibition) are follow-on work-items completes, so the §106 spec-change / §107.x evidence invariants are not</p> |
